Hi Josh,

Just a quick update on our project.

We will have all research components completed by next Thursday. In addition, we expect to finalize our top-level block diagram and final engineering requirements by this time.

We are currently getting ready to install CUDA, ZED SDK, and other necessary software on the Jetson TX2 after we've made a recovery image of the current settings. Afterwards, we will attach the ZED onto the rover to do some preliminary tests to determine the types of images and our course of action going forwards.

We will keep you posted on our progress

Thank you,

ECE 44x Group 25
